

minral

This guide walks you through setting up your new workspace, understanding what's inside, and using it the way it was actually designed to be used — not just duplicated and forgotten.

Open the link below (also included in your purchase email) and click **Duplicate** in the top-right corner to copy the full workspace into your own Notion account.

Quick

app.notion.com/p/391107f38eeb81c7a89dc085f8b198d4

Note: this exact link is unique to your purchase and also appears in your Gumroad receipt / download page.

Open the workspace link above in your browser.

Click Duplicate (top-right corner) to copy it into your own Notion workspace.

Rename the top-level page to your own project name, if you'd like.

Start with the Idea Tracker — most founders skip this step and regret it later.

Move validated ideas into the Roadmap as sprint tasks.

Log every expense in the Finance Tracker from day one — it's much harder to reconstruct later.

What's Inside

Five connected databases, each solving a specific problem that comes up in the first year of running a lean startup. Nothing here is decorative — every database is something we use ourselves, every week.

Idea Tracker

Capture every idea before committing time to it. Fields: Status (New / Validating / Validated / Parked), Problem It Solves, Target Audience, Potential Score, Date Added, Notes.

Why it's here: Stops you from chasing every shiny idea — forces a quick evaluation before you build.

Roadmap + Sprint Board

A kanban board (To Do / In Progress / Done / Blocked) plus a table view. Fields: Priority, Owner, Due Date, Notes.

Why it's here: Replaces Trello or Asana for a one-person or small team — simple enough to actually maintain.

Finance Tracker

A running log of income and expenses by category (Product, Marketing, Tools/Software, Legal, Other), with amount and date.

Why it's here: Gives you a real-time picture of runway without opening a spreadsheet.

Content Calendar

Plan posts across Instagram, Twitter/X, LinkedIn, YouTube, and Blog. Fields: Status (Idea / Drafting / Scheduled / Published), Publish Date, Notes.

Why it's here: Keeps marketing consistent instead of happening in random bursts.

Feature Tracker

Track what's built, in progress, or planned. Fields: Status (Backlog / In Progress / Testing / Shipped), Priority, Description, Target Date.

Why it's here: One place to answer 'what are we actually shipping next' without a stand-up meeting.

Tips for Getting the Most Out of It

- Review the Idea Tracker weekly, not just when a new idea shows up — old ideas sometimes become relevant again as your project changes.
- Keep the Sprint Board small. Five to seven tasks in progress at once is plenty for a solo founder — more than that usually means nothing actually moves.
- Log expenses the same day they happen. A five-second habit now saves an hour of reconstruction later.
- Use the Content Calendar's Status field honestly — an item stuck on 'Drafting' for three weeks is a signal, not just a label.
- Delete what you don't use. This kit is a starting structure, not a rulebook — adapt it to how you actually work.

Frequently Asked Questions

Do I need a paid Notion account?

No. The free tier of Notion supports everything in this workspace.

Can I customize the databases?

Yes — once duplicated, this is your own copy. Add, remove, or rename any field freely.

Will I get updates to this kit?

Yes, future improvements to this kit are free for existing buyers — check the product page on MINRAL for the latest version.

What if I get stuck setting it up?

Reach out through the Contact page at logrith.in/minral/contact and we'll help directly.

Thanks for buying from MINRAL. If this kit saves you time, that's the whole point.
